

To Start: An Engine Class Taught by David Draime of Draime Enterprises

A comprehensive one-day class to enable the race car mechanic to do proper maintenance and general tune-ups efficiently. Learn what to watch and listen for regarding engine performance and to correct problems.

There will be an overview for maintenance of the ignition system and valve train. Steps will be given to troubleshoot ignition problems. The class will include decisions on changing spark plugs, setting the gap, lube and indexing. Valve springs will be checked for acceptable range. Guidelines and replacement skills will be shared.

Class instructions will include; oil and filter brand comparisons, how to check and adjust the ignition timing, how to precisely set the floats and to adjust the carburetor, how to properly adjust the valve lash, gain expertise as you learn to acquire "the feel," and learn to compensate for weather changes and keep your engine running at peak performance.

Individual questions will be answered and Dave's tips will be shared for your fine-tuned race engine's reliability and success.
